

PLANJAN

Indonesian Palm Sugar & Coconut Sugar

From Indonesia, With Trust

International-facing export initiative of PT Pandawa Nusantara Lima

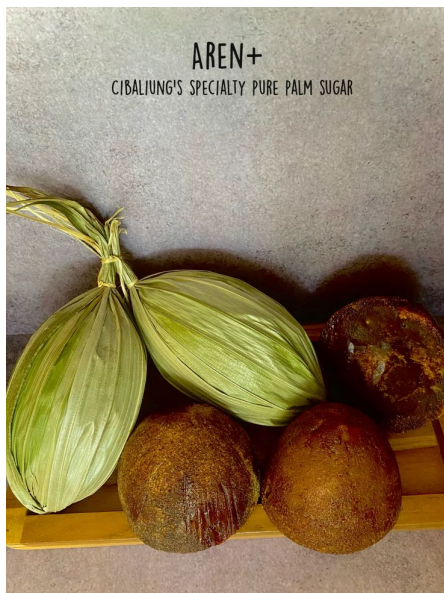

01 | THE PLANJAN STORY

A sweet heritage from Indonesia

PLANJAN is the first product family developed for Garuda Origin, bringing together two distinct Indonesian sugar traditions: palm sugar made from palm sap and coconut sugar made from coconut sap.

We are building PLANJAN from the ground up. Our approach is deliberately transparent: understand the product, document the people and process behind it, organize the information, and grow the export system as real milestones are achieved.

“We do not want to appear larger than we are. We want to become more reliable as we grow.”

Origin: Indonesia Brand: PLANJAN Portfolio: Palm Sugar + Coconut Sugar

02 | PLANJAN PALM SUGAR

Rich, deep and naturally aromatic

PLANJAN Palm Sugar is produced from palm sap (nira aren). Based on the current product information provided by Garuda Origin, it is made without added cane sugar and has a dark brown to deep, almost black appearance with a rich natural aroma.

Current product format
Cube / Coin / Granule

Reference piece weight
Approximately 100 g per piece

Profile
Dark color, strong natural palm aroma

Use
Food & beverage applications; final applications to be matched to buyer requirements.

03 | PLANJAN COCONUT SUGAR

Golden color, gentle sweetness and a natural coconut-sap character

PLANJAN Coconut Sugar is produced from coconut sap (nira kelapa). The current product description records a golden-brown color and a naturally fragrant aroma derived from fresh coconut sap.

Current product format
Cube / Coin / Granule

Reference piece weight
Approximately 100 g per piece

Profile
Golden-brown appearance and
naturally fragrant aroma

Use
Food & beverage applications; final
applications to be matched to buyer
requirements.

configuration, HS code, export documentation and any certification claims will be added only after verification.

05 | FROM SAP TO PRODUCT

A real production story

Garuda Origin wants buyers to see the product in context: the raw material, the people, the craft, and the preparation that lead to the finished sugar.

- | | |
|----|---|
| 01 | Harvest
Fresh sap is collected from palm or coconut trees. |
| 02 | Cooking
The sap is processed through a traditional cooking process. |
| 03 | Stirring
The syrup is continuously stirred until it reaches the required consistency. |
| 04 | Forming
The product is shaped into available formats such as cube, coin or granule. |
| 05 | Preparation
The product is prepared for sampling, buyer evaluation and future export handling. |

06 | BUYER QUESTIONS

What is the difference between PLANJAN Palm Sugar and PLANJAN Coconut Sugar?

They are separate product variants based on different sap sources: palm sap (nira aren) and coconut sap (nira kelapa).

Does PLANJAN contain added cane sugar?

The current product data states that no cane sugar is added to either variant.

What forms are available?

The current range includes cube, coin and granule formats. Other formats can be discussed according to actual production capability.

What is the MOQ?

The current minimum order quantity is 100 kg.

What is the shelf life?

The current product data states a 12-month shelf life. Storage conditions should be followed.

Can Garuda Origin provide custom specifications or packaging?

Requirements can be discussed and confirmed case by case. Garuda Origin will only confirm specifications and packaging that can be verified and fulfilled.

How can a buyer request a sample?

Sample-request procedures and official business contact channels will be added to the public catalogue once the communication system is finalized.

07 | OUR PROMISE

From Indonesia, With Trust

Garuda Origin is being built on a simple principle: do not promise what we cannot prove. We are building a responsible export platform step by step - learning the products, documenting real processes, preparing the systems, and earning buyer trust through consistent action.
